## Research Projects

---

Chicago Light Pollution App via Google Earth Engine, UNC Chapel Hill School of Data Science, 01/01/26 - 05/01/26, Using GGE platform, rendered an application that scans active light pollution with up-to-date satellite remote sensory data.

Extreme Heat and Elderly Mortality, UNC Institute of Risk Management, 01/01/26 - 05/01/26, Using a GRIDMET Dataset (489,858 grid cells), concluded that there is a significant correlation between extreme heat (90+ degrees F.) and higher elderly mortality; dependent on exposure.

Median Household Income Variance Across Census Tracts (Raleigh), UNC Chapel Hill School of Data Science, 09/01/25 - 12/01/25, Using R platform, found statistical significance of the relationship ( $p < 0.001$ ) that poverty rate is a meaning predictor of income variation, and a strong-negative association between variables of high poverty rates corresponding to lower median incomes.

Fragment Drug Ring Network, UNC Chapel Hill School of Data Science, 01/01/25 - 05/01/25, Using R platform, imported and cleaned up four of the largest drug datasets available.

Geospatial Violence Heatmapping (Chicago), UNC Chapel Hill School of Data Science, 01/01/25 - 05/01/25, Using QGIS platform, imported, researched, and analyzed an all-crime per capita dataset.
